Hello, how are you?

Regarding how the system works and how to use it:

The system is designed to filter products from the spreadsheet.

How it works:

Simply enter what you want to filter in the input fields. You can also apply multiple filters at the same time.

Example:

Click on the size input, select "P," and click **Submit**. In [this spreadsheet](#), a new tab called **"Results"** will be created, where you can see the filtered items.

You can also combine more than one filter, such as size and gender, for example.

If you want to refine your search, you can clear the filters and start over.

Let me know if you need anything!
